

# CollabSphere

A simple platform for teamwork, project coordination, and knowledge sharing

|                                                                                              |                                                                                              |
|----------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------|
| <b>Purpose</b><br>Bring teams, ideas, tasks, and files together in one shared digital space. | <b>Designed for</b><br>Students, clubs, project teams, creators, and small organisations.    |
| <b>Core value</b><br>Make collaboration clear, visible, and easy to manage.                  | <b>Format</b><br>Web-based collaboration platform with a clean, beginner-friendly interface. |

## Project brief

CollabSphere is a concept for a single online workspace where people can create teams, plan work, communicate, share files, and track progress. The aim is to reduce the confusion caused by using separate apps for chat, meetings, documents, and task updates.

## Features at a glance

| Feature               | How it helps                                                                |
|-----------------------|-----------------------------------------------------------------------------|
| Team spaces           | Create a dedicated area for each class, club, client, or project.           |
| Tasks and deadlines   | Assign work, set due dates, and show progress in one place.                 |
| Messages and meetings | Keep announcements, discussion, and meeting links connected to the project. |
| File sharing          | Store project documents, presentations, images, and reference material.     |
| Activity updates      | Make recent changes visible so every member stays informed.                 |

## Suggested user journey

|                                                                       |                                                                  |                                                                |                                                                        |
|-----------------------------------------------------------------------|------------------------------------------------------------------|----------------------------------------------------------------|------------------------------------------------------------------------|
| <b>1. Create</b><br>Start a workspace<br>and invite<br>collaborators. | <b>2. Organise</b><br>Add tasks, files, and<br>clear milestones. | <b>3. Collaborate</b><br>Discuss ideas and<br>update progress. | <b>4. Deliver</b><br>Share the final output<br>and reflect on results. |
|-----------------------------------------------------------------------|------------------------------------------------------------------|----------------------------------------------------------------|------------------------------------------------------------------------|

## Possible future additions

Video meeting integration, AI-based task summaries, mentor feedback, project templates, calendar reminders, and role-based access can be added as the platform grows.
